

SIMPLON

KAGU PINION

City to city – the SIMPLON Kagu Pinion is a comfortable city ebike that proves its excellent riding qualities not only on tarmac, but also far beyond the city limits. The integration of the powerful, low-maintenance Pinion MGU motor is second to none in the city bikes segment, while the lightweight carbon frame ensures lively, nimble handling. Following the “riding fun meets cool design” motto, the SIMPLON Kagu delivers a very high level of riding comfort even without a suspension fork. To achieve this, SIMPLON combined a carbon frame, rigid carbon fork and voluminous balloon tires. The SIMPLON Kagu Pinion relies on an integrated gearbox that allows you to shift gears in a flash, at the push of a button. Furthermore, SIMPLON’s comprehensive online configurator allows you to customise the spec and look of your bike to suit your needs and preferences – and you can also choose a frame with a sloping top tube. If you want even more riding comfort for long tours, SIMPLON also offer an optional suspension fork. With its generous maximum battery capacity of up to 1,430 Wh (with range extender) the SIMPLON Kagu Pinion is also suitable for epic tours beyond the city limits.
